

HR Analytics Dashboard

Project Overview

The **HR Analytics Dashboard** was built in **Power BI** to examine workforce trends, employee attrition, and demographic patterns within an organization. The report combines HR metrics with employee demographics, salary distribution, job roles, and satisfaction levels to help HR teams understand the factors influencing employee turnover.

The dashboard is designed to support workforce planning, employee retention strategies, and organizational decision-making through meaningful HR insights.

Project Objectives

This dashboard addresses key HR questions, including:

- What is the overall employee attrition rate?
- Which age groups experience the highest turnover?
- How does attrition vary across education backgrounds?
- Which salary ranges are more likely to leave the organization?
- Which job roles have the highest employee attrition?
- Does job satisfaction differ across roles?
- How does employee tenure relate to attrition?

Key Performance Indicators

Metric	Value
Total Employees	1,470
Attrition Count	237

Attrition Rate	16.1%
----------------	--------------

Average Age	37 Years
-------------	---------------------

Average Salary	6.5K
----------------	-------------

Average Years at Company	7 Years
-----------------------------	----------------

These KPIs provide an overview of the organization's workforce and employee retention status.

Dashboard Analysis

Employee Attrition by Education

Employees were grouped according to their educational background.

Findings

- Life Sciences recorded the highest attrition.
- Medical and Marketing graduates followed.
- Technical Degree holders and employees from other educational backgrounds showed comparatively lower attrition.

Business Perspective

Understanding educational trends helps HR identify talent groups that may require additional engagement and retention initiatives.

Attrition by Age Group

Employee exits were analyzed across different age brackets.

Findings

- Employees aged **26–35** experienced the highest attrition.
- The **18–25** and **36–45** age groups followed with similar turnover levels.
- Employees above **55 years** recorded the lowest attrition.

Business Perspective

Early and mid-career professionals appear more likely to leave, indicating opportunities to improve career development and retention programs.

Attrition by Salary Range

Employees were categorized according to salary levels.

Findings

- Employees earning **up to 5K** had the highest attrition.
- Attrition steadily decreased as salary levels increased.
- Employees earning **15K and above** recorded the lowest turnover.

Business Perspective

Compensation appears to influence employee retention, particularly among lower salary bands.

Attrition by Job Role

The dashboard compares employee turnover across different job roles.

Findings

- Sales Representatives experienced the highest attrition.
- Sales Executives and Research Scientists also reported relatively high turnover.
- Research Directors showed the lowest attrition.

Business Perspective

Departments with higher employee exits may benefit from improved career progression, workload balancing, or employee engagement initiatives.

Job Satisfaction Analysis

Job satisfaction scores are displayed alongside attrition counts for each job role.

Findings

The report allows HR teams to compare employee exits with satisfaction levels, making it easier to identify roles where lower satisfaction may contribute to higher turnover.

Attrition by Years at Company

Employee attrition was analyzed based on tenure.

Findings

Attrition is highest during the early years of employment and gradually declines as employee tenure increases.

Business Perspective

The initial years represent the most critical period for employee retention, emphasizing the importance of onboarding, mentoring, and early career support.

Gender Comparison

The dashboard compares attrition between male and female employees.

Findings

Attrition levels are relatively similar, with male employees showing a slightly higher turnover rate than female employees.

Business Perspective

Retention challenges appear to affect both genders similarly, suggesting that broader organizational factors may have a greater influence than gender alone.

Power BI Features Used

- Power BI Desktop
- Power Query
- Data Modeling

- DAX Measures
- KPI Cards
- Doughnut Charts
- Bar Charts
- Line Charts
- Matrix Visualization
- Department Slicers

Key Insights

- The organization has an overall attrition rate of **16.1%**.
- Employees aged **26–35** account for the highest employee turnover.
- Attrition is highest among employees earning **up to 5K**.
- Sales Representatives experience the greatest attrition among all job roles.
- Life Sciences employees contribute the largest share of attrition by education.
- Employee exits are concentrated during the early years of employment.
- Male and female attrition rates remain relatively close.

Conclusion

The HR Analytics Dashboard provides a comprehensive view of employee attrition by combining workforce demographics, compensation, tenure, education, and job-role analysis. These insights can assist HR teams in identifying retention challenges, improving employee engagement strategies, and supporting data-driven workforce planning.
